Clinical Notes:

A complete blood count (CBC) is used to evaluate overall health and detect a wide range of disorders, including anemia, infection, and leukemia. There have been some reports of WBC and platelet counts being lower in venous blood than in capillary blood samples, although still within these reference ranges.

Possible causes of abnormal parameters:

	High	Low
RBC, Hb, or HCT	Dehydration, polycythemia, shock, chronic hypoxia	Anemia, thalassemia, and other hemoglobinopathies
MCV	Macrocytic anemia, liver disease	Microcytic anemia
WBC	Acute stress, infection, malignancies	Sepsis, marrow hypoplasia
Platelets	Risk of thrombosis	Risk of bleeding

Separate employee account & permissions

You can create separate employee logins and manage/customize the permission given to each employee. Only provide access to what's necessary. This will help you to:

- ✓ Reduce internal frauds.
- ✓ Fine grand control over employee access to lab account data.
- ✓ Protect account-level data from accidental or intentional modification.
- ✓ Employee activities are tracked. Audit, if necessary.
